Intern Project Report

By Debashis Karmakar

Project Title: ECom-App

Project Duration : 14th June 2018 – 29th June 2018

Aim : To implement a simple E-commerce Application on Android mobile system

Scope :

- Create, Edit, Delete from a catalogue of items that can be purchased by various Users.
- Secure Login mechanism with, an 'admin' account with the ability to create, edit, delete user profiles.
- Ability of User to purchase items in the Catalogue, buy adding them to a 'Cart' and subsequently checking out.
- Ability to View purchasing history for a particular User.
- Administrative services to perform CRUD operations on the Database.

Technology Used:

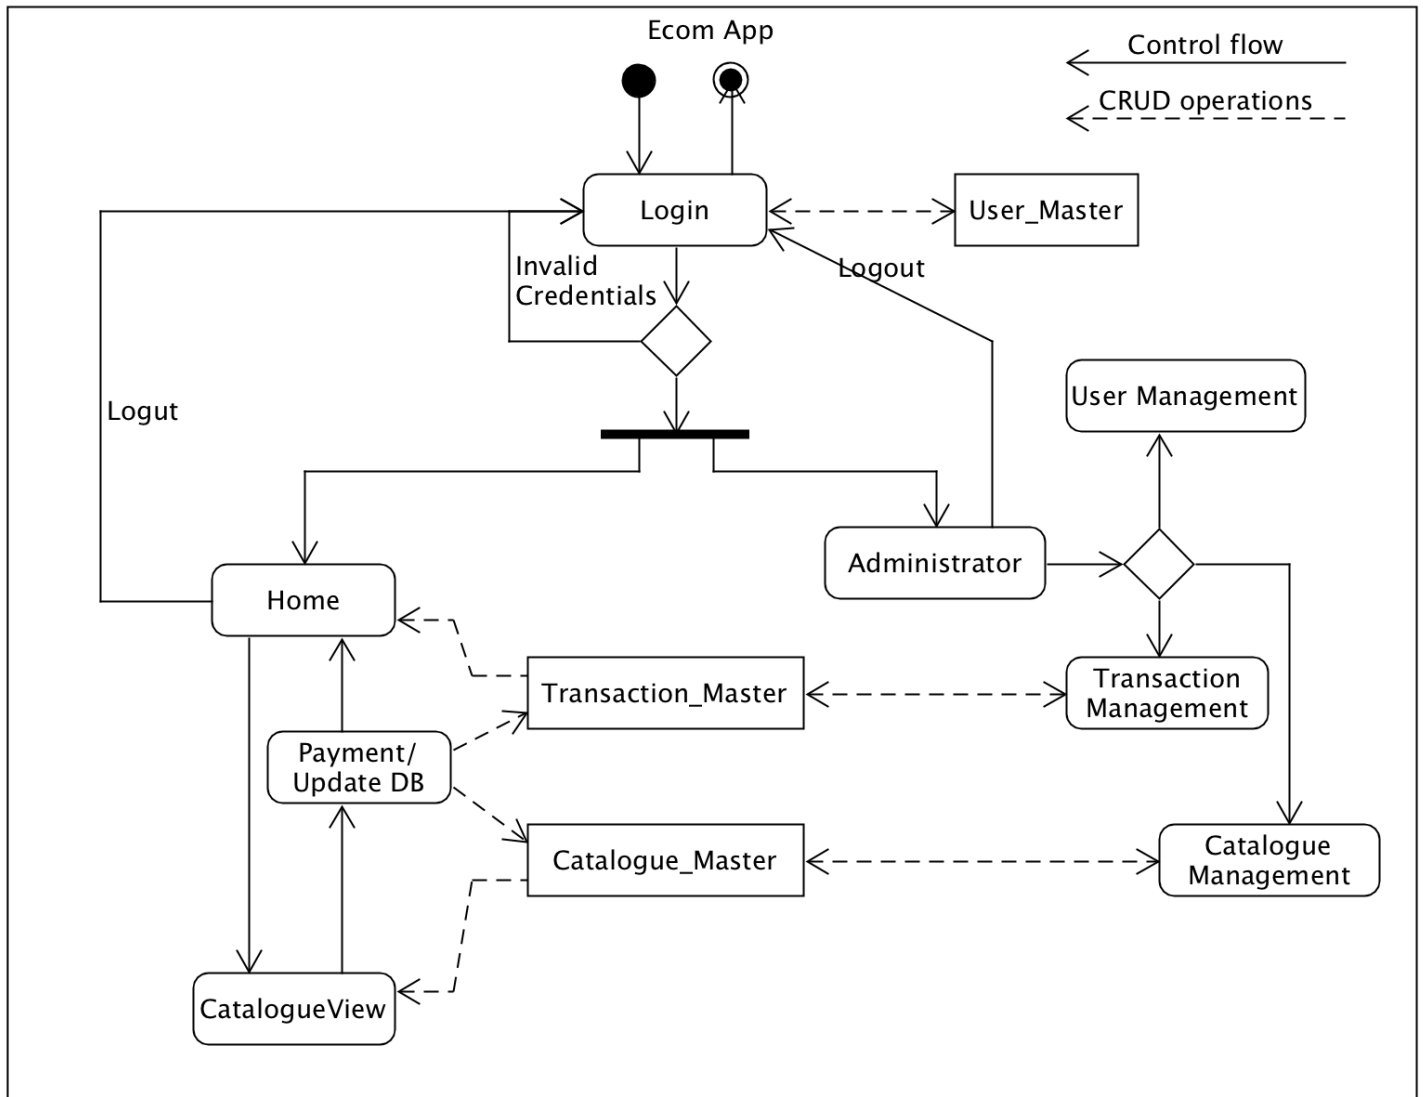

- Android-Java on Android studio.
- SQLite Database supported by Android.

Components:

- ❖ DataBase(SQLite) – EcomAppDB.db
 - User_Master Table : Columns – [u_id, u_name, u_pass, RegDate]
 - Catalogue_Master Table : Columns – [c_id, c_type(or category), ProductName, Price, Stock]
 - Transaction_Master Table : Columns – [t_id, u_id, c_id, Amount, Date/Time]
- ❖ Login Module – Start activity of App and destination activity on logout.

- ❖ Administrator Module:
 - User Management – To perform CRUD operations on User_Master
 - Catalogue Management – To Perform CRUD operations on Catalogue_Master
 - Transaction Management – To perform CRUD operations on Transaction_Master
- ❖ Home Module – Shows Purchase history of the logged in user.
- ❖ CatalogueView Module – Shows all items available for purchase, Add items to a Cart and buy them.

Transaction Process:

Limitations:

- ❖ Local Database is maintained with in the User's handset.
- ❖ Database version upgrade options limited
- ❖ Simple User Interface

Conclusion:

Simple application that meets the requirements has been implemented.

Further Improvement:

- ❖ Attempt to apply Block Chain technology on transaction details.
- ❖ Transfer local DB to Web Server, with read only access on the local DB and Administrator Module as a web application.
- ❖ Improve User Interface by implementing tabbed/menu driven system.
